

Advanced genomic analysis solutions

Advanced genomic analysis makes it possible to diagnose and even prevent the genetic alterations that underlie a broad spectrum of conditions, including rare diseases.

The Galician Public Foundation of Genomic Medicine is a nationwide reference center that provides services to all hospitals in Galicia.

Its ability to identify genetic disorders allows a personalized approach to diseases that have already manifested themselves and the prediction of conditions before the first symptoms appear.

Priority areas of action
PRECISAÚDE Health Innovation Plan, focused on 5P medicine
Innovative solutions based on biomarkers
Innovative simulation systems
Innovative therapies

Call for Preliminary Market Consultation of the PRECISAÚDE Health Innovation Plan (OPEN) >
